

12. *Teucrium racemosum* low on your right is a delicate small bush with narrow silvery leaves and white to pale blue flowers with a prominent lip (photo below left). This plant grows in the wild across the mainland states.

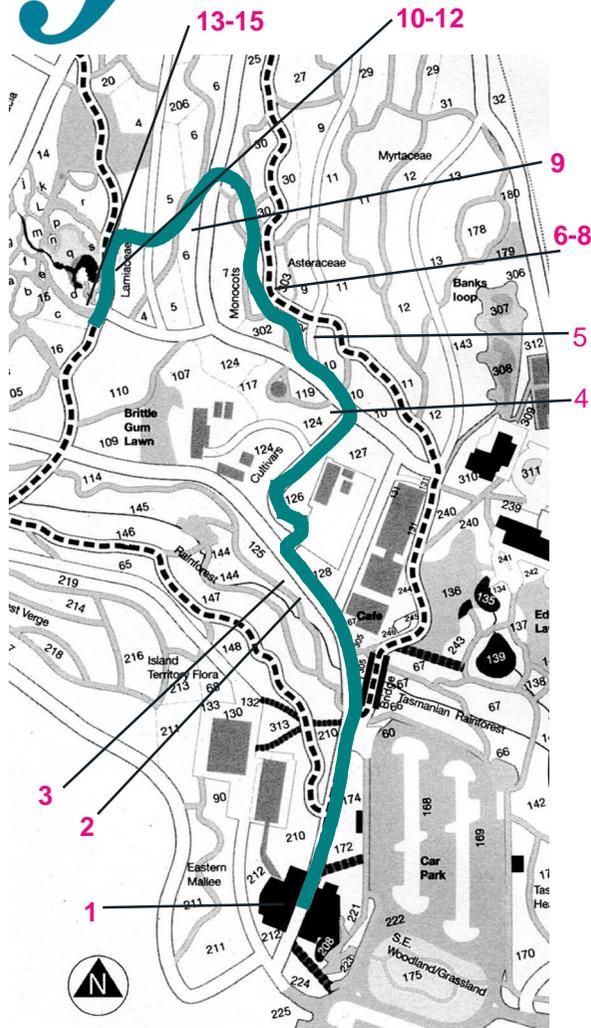

13. On your right near the steps up to the Rock Garden is *Hibbertia serpyllifolia*, or Hairy Guinea Flower, showing very fine light green foliage with 5-petalled bright lemon flowers in profusion (photo above right). This plant grows down the eastern coast of Australia, including Tasmania.

14. Continuing on your right is *Casuarina glauca prostrate form* or Swamp Oak (photo below left). This plant has hard, long, green foliage which can fall attractively to soften edges in the garden. It is a slow to moderate growing, prostrate fine leaf form of the common she-oak seen growing throughout eastern Australia mainly around moist gullies, streams and waterways.

15. Also on your right is *Hibbertia scandens* or Snake Vine, a popular and vigorous green climber with large yellow flowers (photo above right). It is found along the coast of New South Wales and Queensland.

A publication of the Friends of the Australian National Botanic Gardens

21 December, 2016 to 3 January, 2017

Featuring the plants of the Australian National Botanic Gardens, Canberra, ACT written and illustrated by Friends Rosalind and Benjamin Walcott

Today we will walk to the Asteraceae (daisy) garden finishing near the waterfall at the Rock Garden

1. As you leave the Visitors Information Centre look up to your left to see *Pandorea jasminoides* covered in pink flowers and attractive mid-green foliage (photo above). This woody vine, also known as Bower of Beauty, is native to New South Wales and Queensland, and forms large pointed pods filled with papery seeds

2. Bear left up the hill behind the café to see on your left *Clerodendron floribundum var. attenuatum* or Lolly Bush, a small rainforest tree in full bloom with clusters of strongly scented white bell flowers against dark green foliage (photo next page top left). *Clerodendron floribundum* grows widely across the top of Australia and down the coast of Queensland and New South Wales.

3. ***Cymbidium suave*** further on your left is an orchid with sprays of small green and brown flowers and strap like foliage growing out of a log (photo above right). This plant is found in the wild along coastal Queensland and New South Wales.

4. Turn right behind the depot, then left up the hill to see on your left ***Elaeocarpus reticulata*** 'Prima Donna', a small dense tree with green leaves and pink, fringed bell flowers (photo below). Blue berries which follow the flowers are attractive to seed eating birds.

5. Continue up the hill then turn right into the Asteraceae Garden. On your right is ***Callistachys lanceolata***, a small tree with green leaves and orange pea flowers with red accents (photo below). Commonly known as the Wonnich or Native Willow, this plant is native to southwestern Western Australia.

6. Bear left along the path to see on your left ***Leucophyta brownii*** with cushions of silver foliage and yellow button flowers (photo below). The flowers appear silver in bud (as in the photo) and brown when fruiting. This plant grows in the wild along the southern coast of mainland Australia and the northern coast of Tasmania.

7. Further on your right in a pot is ***Brachyscome*** 'Pacific Reef' with blue green foliage and bright purple daisy flowers with gold centres (photo below).

8. Again on your right in a pot is ***Xerochrysum palustre*** with green foliage covered in yellow daisy flowers with gold centres (photo below). This plant is listed as vulnerable in the wild and is found along the south coast of Victoria and the north east coast of Tasmania.

9. Turn left towards the Rock Garden to see on your left ***Ammobium alatum*** with grey winged foliage topped by white daisies with gold centres (photo below). The plants grow in the wild in eastern New South Wales and Victoria.

10. On your left across from the waterfall is ***Xerochrysum bracteatum*** or Paper Daisy with a mass of bright gold paper daisies on green linear foliage (photo below). This bright patch is full of butterflies and this plant is widespread in various habitats in all states and territories.

11. On your right in front of the waterfall is ***Eremophila dalyana*** with grey foliage covered in white tubular flowers (photo below). This long-lived plant was named after Sir Dominick Daly, a 19th century Governor of South Australia. This plant occurs in the wild in southern Northern Territory, northern South Australia and Queensland.
