

12. Still on your left is **Crowea 'Little Rockstar'**, a compact form of *Crowea*, reaching only 60-80cm high, from a seedling variant growing at the ANBG (photo below left). This plant has many pink star flowers.

13. On your left again is **Grevillea 'Bloodline'**, bred at Bywong Nursery by Peter Ollerenshaw, similar to the long-flowering variety *Grevillea* 'Lady O', but with a slightly arching habit (photo above right)

14. To the back on your left in a pot is **Grevillea 'Bush Lemons'** with lemon toothbrush flowers on grey-green divided foliage (photo above).

15. Further on your left is **Phebalium woomboe**, a bushy shrub with slender leaves, silver on the reverse, and clusters of starry, pink flowers, native to southeastern Queensland and northeastern NSW coastal regions (photo above).

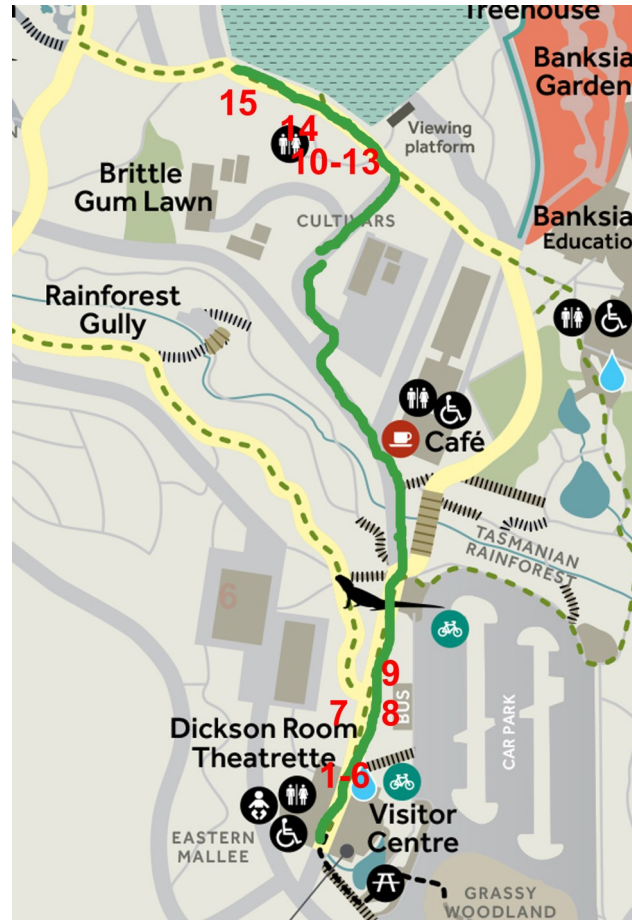

A publication of the
Friends of the Australian
National Botanic Gardens

4 - 17 March 2026

Featuring the plants of the Australian National Botanic Gardens, Canberra, ACT. Written and illustrated by ANBG Friends Rosalind and Benjamin Walcott

Today we will take a short walk from the Visitor Centre up the hill behind the café, towards the waterfall

1. As you leave the Visitor Centre look up to your left to see ***Pandorea jasminoides*** covered in scented, pink, trumpet flowers with attractive mid-green foliage (photo above). This woody vine, also known as Bower of Beauty, is native to NSW and Queensland, and displays large, pointed pods filled with papery seeds.

2. On your right, in a pot, is ***Pilidiostigma rhytispermum***, or Small-leaved Plum Myrtle, a woody shrub with small leaves and cream cup flowers with prominent yellow stamens (photo next page top left). This plant has black fruits which are attractive to many fruit eating birds and is native to the coast of southeastern Queensland.

3. Also on your right, in a pot, is ***Crowea saligna***, a small shrub with large, pink flowers and aromatic foliage (photo above right). Native bees and butterflies are attracted to this plant which is native to the central coastal area of NSW.

4. Across to your right, in a pot, is ***Eremophila cuneifolia* x *E. fraseri***, the most spectacular of all the *E. cuneifolia* hybrids, forming a shrub 2m high and wide with large green leaves, purple flowers with spotted throats, and very large pink sepals (photo above).

5. Further down to your right is ***Kunzea baxteri* 'Scarlet Jack'**, a compact bush with light green-grey foliage and profuse red bottlebrush flowers with gold tips (photo above).

6. Down to your right again is ***Grevillea* 'Peaches and Cream'** with deeply divided green leaves and large flower heads of pink and cream (photo below). This hybrid was developed in Queensland by Jan Glazebrook and Dennis Cox and patented in 2006.

7. On your left is ***Epacris longiflora* 'Nectar Pink'**, a very floriferous small shrub covered in slender pink bells with white tips (photo below).

8. On your right is ***Corymbia* 'Summer Red'**, a grafted eucalypt with dark-green, leathery foliage, attractive new red foliage, red fluffy flowers with yellow centres just opening and beautiful bud formations (photo below).

9. Also on your right is ***Viola* sp.**, a close groundcover with fresh green foliage and bright blue flowers (photo below).

10. Bear left up the hill behind the café then right along the road above the depot to see, on your left, ***Grevillea* 'Legacy Flame'**, a small grevillea, bred locally by Bywong Nursery, which commemorates 100 years of Legacy Australia with flame-like orange-red flowers which resemble the Legacy torch (photo below).

11. On the corner, to your left as you turn up the hill, is ***Westringia fruticosa* 'Wunderbar' or 'Double Wonder'**, a small dense shrub with grey-green foliage and pale mauve or pink semi-double flowers (photo below).
