

FRIENDS OF BLACK MOUNTAIN IN CONJUNCTION WITH MOLONGLO CONSERVATION GROUP, ANPS ACT, Conservation Council ACT Region, Field Naturalists ACT, Friends ANBG, NPA (ACT), and U3A.

REPORT - 50TH ANNUAL SPRING WILDFLOWER WALK, 23 OCTOBER 2020

Intro	<p>The annual Spring Wildflower Walk is usually held on the second Saturday of October each year, following the tradition of Nancy Burbidge and George Chippendale. However, this year the Walk was postponed to 23 October 2021 because of the ACT Government lock-down and restrictions associated with COVID.</p> <p>Burbidge and Chippendale had led wildflower rambles on many occasions in the 1950s and 1960s but in 1971 it was agreed to make it a special annual even, held in conjunction with other organisations. It has been a very popular event for 50 years, with large numbers of participants each year.</p>
Weather	<p>The weather was a clear sunny day, with forecast maximum temperature of 18°C. There has been good rain in the last couple of years, which has encouraged plant growth, and re-generation after approximately 90% defoliation in parts of the Black Mountain reserve by the hail-storm of 20 January 2020.</p>
Meeting point & Destination	<p>We met at Belconnen Way entry to the Reserve. Banners were placed at a couple of points in advance of the entry to the nature reserve, in order to help people identify in good time where they could park and walk to the meeting point.</p>
Leaders	<p>The guides this year were Alexander Schmidt-Lebuhn, Helen Cross, Isobel Crawford, Joy McMahon, Linda Beveridge, Lucinda Royston, Michael Doherty, and Michael Mulvaney, who each led a group of approx. 8 to 20 people.</p>
Coordinators	<p>Libby Viccars, Gordon McAllister, Morgyn Phillips, and Stuart Mules, as well as Joy, Linda and Michael Doherty provided valuable work in preparation beforehand, on the day, and after the event.</p> <p>Linda obtained approval from the government for use of public land because more than 20 people were anticipated to attend the full event.</p> <p>Libby arranged for the departure time of the groups to be at different times, rather than all meeting at the same time. This enable the number of people present at the meeting point to be within the ACT Government's COVID guidelines.</p>
Publicity	<p>Notices were placed on gates and ParkCare Notice board, a note was sent to the FoBM distribution list. As in previous years, this ramble was also promoted by Australian Native Plants Society, the catchment groups, Field Naturalists ACT, Friends of the ANBG, National Parks of Australia (ACT), Parks and Conservation Service, and U3A. This involves a lead time of about 3 months.</p> <p>The ramble was also mentioned in radio interviews.</p> <p>The bookings were made quickly and early, and the maximum number of 100 was reached a few weeks before the event. However, as vacancies arose, people on the</p>

	waiting list filled those vacant places, so at the end there were a very small number on the waiting list.																						
Attendance	As usual, a small number of people did not arrive, but their places were taken by a small number of people who had arrived without making a booking. We had a total of 87 participants on the day, who departed in groups at different times																						
How they heard about it	<p>Based on rounded figures of responses received from 71% of the participants, they had heard about the walk in the following ways.</p> <table border="1"> <thead> <tr> <th>Source</th> <th>Percent</th> </tr> </thead> <tbody> <tr> <td>Friend</td> <td>34</td> </tr> <tr> <td>FoBM Email</td> <td>19</td> </tr> <tr> <td>U3A</td> <td>11</td> </tr> <tr> <td>FANBG</td> <td>11</td> </tr> <tr> <td>Red Hill Regenerators</td> <td>8</td> </tr> <tr> <td>FoBM Facebook</td> <td>5</td> </tr> <tr> <td>Landcare</td> <td>5</td> </tr> <tr> <td>FOG</td> <td>3</td> </tr> <tr> <td>NPA</td> <td>3</td> </tr> <tr> <td>Total % (rounded)</td> <td>99</td> </tr> </tbody> </table>	Source	Percent	Friend	34	FoBM Email	19	U3A	11	FANBG	11	Red Hill Regenerators	8	FoBM Facebook	5	Landcare	5	FOG	3	NPA	3	Total % (rounded)	99

Handouts	<p>The participants also greatly appreciated:</p> <ul style="list-style-type: none"> • plant list, • the background paper about the Spring Wildflower Ramble, and • the quiz which large majority enjoyed doing. <p>100 copies of each of these were printed and about 10 of each were we brought back home.</p> <p>A copy of each of these is attached. The Quiz sheet, is followed by the Quiz sheet with Answers that was provided to the leaders, who gave answers to participants at the end of the walk.</p>																						
Observations	The Plants in Flower on Black Mountain (attached) includes records of 113 species in flower this year along the routes that were used in previous years. Comparisons of recorded species in flower; 46 species in 2016, 30 in 2017, 35 in 2018, 32 in 2019, and 71 were recorded in 2020.																						
Hours	Volunteer hours by leader, coordinators on day, guides, and other work leading up to, during and after the ramble totalled approx. 97 hours.																						
Feedback	<p>We have received very positive feedback about the ramble. People were delighted to see so many plants flowering, including a number of people who were particularly interested in seeing the orchids.</p> <p>We also received very positive feedback from several people on the handouts, including the use of the quiz.</p>																						
Thank you	<p>A big thank you to the eight guides for giving their Saturday morning to lead the different groups along slightly different directions.</p> <p>Another big thank you to each of the Coordination committee members, and their colleagues, for their voluntary contribution towards this successful event.</p>																						

	A special thank you to each of the organisations for sponsoring and supporting this event: ANPS, Field Naturalists Canberra, Friends ANBG, National Parks Association ACT, Parks and Conservation Service, and University of 3 rd Age.
Summary	Another successful special event, with very positive feedback about the ramble and the people involved with it. It also helped to raise funds for FoBM. Overall, it was very successful and well worth doing again.

Name: Linda Beveridge
Date: 30 November 2021

FRIENDS OF BLACK MOUNTAIN SPRING WILDFLOWER RAMBLE

BACK GROUND

Rambles on Black Mountain were started by **Dr Nancy Burbidge** and when Nancy became too frail the rambles were continued by **George Chippendale**. They decided in 1971 that there would be annual spring wildflower walks. Then in 2004 he passed the responsibility to **Jean Geue** who was keen to continue this tradition in conjunction with Friends of Black Mountain.

Who was Dr Nancy Burbidge? Nancy was an outstanding scientist who specialised in botany and won a scholarship to work and study at the Royal Botanic Gardens in Kew, England. After returning to Australia, she was appointed to the new position of systematic botanist in the CSIRO Division of Plant Industry in 1946. Nancy focussed on the study of grasses, and also provided plant identification services, and was a key player for the establishment of the national Australian herbarium. Nancy also produced many small and large books about Australian plants.

As well as leading many rambles, she also wrote many articles about native plants and many non-botanists had their first introduction to the wonders of Australian flora through her writing and her walks. She also had very active involvement in the proposals for national parks and nature reserves, including the Black Mountain Nature Reserve and the Namadgi National Park.

Dr Burbidge was made a member of the Order of Australia in 1976 for her services to botany in the widest sense.

George Chippendale was also a keen leader of walks with the National Parks Association, and he spent much of his life in Canberra studying eucalypts.

In 1954 he moved to Alice Springs as the first resident plant taxonomist, a job he loved. He made many trips into the bush with colleagues and assistants to collect plant specimens. These specimens were the basis for the present Northern Territory Herbarium.

He moved to Canberra in 1966 to take up the position of senior botanist in the then Forestry Research Institute, which became the Division of Forestry Research, CSIRO. His main specialisation became the genus Eucalyptus. He spent a year at Kew Gardens in England, examining type material of Eucalypts and travelling to several European herbaria to examine similar material.

George published a number of books on Eucalypts and held many classes about Eucalypts and other botany at the Forestry Institute and later at the U3A, as well as leading walks about eucalypts and other plants in Black Mountain, other Nature Reserves and National Parks.

We honour the great work that Nancy Burbidge and George Chippendale did in order to enhance people's knowledge and appreciation of the beautiful Australian native plants, and especially those in Black Mountain Nature Reserve. And it is a delight that Jean Geue continued with these walks after George's retirement from them, and that George's daughter, Joy, is continuing the tradition, too.

Dr Nancy Burbidge
